INSTALLATION AND MAINTENANCE

It is suggested to lay tiles with a joint of 3-4 mm. ■ Use high quality adhesive and unsanded grout (Keracolor U) from a manufacturer such as Mapei, following manufacturer's recommendations and depending on site conditions. ■ As soon as the joints have fully set, it is advisable to proceed to the initial post-construction cleaning as described by the manufacturer. ■ Daily maintenance can be performed with a neutral detergent, the use of abrasive cleaners is not recommended.

Due to the artisanal nature and the materials it is made with, this product will present variations in caliber, texture, design and shade. These variations give the product unique characteristics and personality. Special care should be taken during installation to ensure that any adhesive or unsanded grout is immediately wiped from the surface of the tiles. This should be done using a sponge and clean water. Abrasive agents, acids, alkalis and strong detergents should not be used. Clean only with a sponge or soft cloth using neutral liquid soap.
